

Brand Guidelines

The definitive reference for our logo, colour system, and visual proportions across every printed and digital asset we produce.

01 Logo

Lockup, icon, clear space, minimum size

The Vaeleon logo has two elements: the "V" **icon**, built from two overlapping gradient ribbons, and the **lowercase logotype**. They are used together as a horizontal lockup. The icon may stand alone only where space is genuinely tight, such as a favicon, a profile picture, or a watermark.

Primary lockup. Light background, logotype in Deep Navy #001741.

Reversed lockup. Logotype in Pure White #FFFFFF. The icon never changes.

Icon alone. Reserved for constrained spaces.

Clear space. Keep at least x on every side, where x equals the height of the "V" icon.

Minimum size. Lockup 22 mm wide, icon alone 6 mm.

WHAT NOT TO DO

Never stretch or condense.

Never recolour the icon.

Never set the logotype in white on amber.

Never place it on a busy colour field.

02 Core palette

Four brand colours

Deep Navy carries stability and professionalism. The Blue, Amber, and Red accents supply the energy. Deep Navy and white do the structural work; the accents are deployed sparingly and deliberately.

Deep Navy HEX #001741 RGB 0 23 65 CMYK 100 92 40 58	Electric Blue HEX #007BFF RGB 0 123 255 CMYK 85 52 0 0	Vibrant Amber HEX #FFB800 RGB 255 184 0 CMYK 0 28 100 0	Dynamic Red HEX #FF2A00 RGB 255 42 0 CMYK 0 92 100 0

03 Neutral scale

Ten steps, derived from Deep Navy

White and one light grey are not enough to build tables, borders, secondary text, and disabled states. This scale is derived from Deep Navy so that our greys share the same undertone as the brand rather than sitting apart from it.

0	50	100	200	300	400	500	600	700	800
---	----	-----	-----	-----	-----	-----	-----	-----	-----

0 to 100

Page backgrounds, section backgrounds, secondary cards, dividers.

#FFFFFF #F4F6F9 #E1E7EF

200 to 400

Borders, disabled icons, placeholders, helper text.

#C3CCDA #94A2B8 #6B7C9B

500 to 800

Secondary text, headings, dark backgrounds, footers.

#475D85 #1E3A6B #001741

Print note. The CMYK figures above are approximate conversions from RGB rather than the output of an ICC profile. For offset production, ask the printer to convert using the appropriate profile and run a colour proof before the press run, particularly for Vibrant Amber, which drifts towards green easily.

04 Gradient specification

The two ribbons that form the "V"

The "V" icon is built from two overlapping gradient ribbons. Where they cross near the base, the overlap produces the sense of three-dimensional depth. The values below are measured directly from the master artwork.

Left ribbon · Blue Gradient

Start (top left)	#00A8FF
End (bottom right)	#0026BE
Angle	135°

Right ribbon · Warm Gradient

Start (top right)	#FFC400
End (bottom left)	#FF2A00
Angle	45°

05 Where Vibrant Amber sits

The flat colour and the ribbon are one family

Vibrant Amber is not a separate colour bolted onto the palette. It is lifted from a point on the warm ribbon itself, which is why an amber button or badge always reads as part of the same identity as the logo.

#FFB800

Gradient geometry

Always linear. Radial and conic gradients are not used on Vaeleon assets.

Use beyond the logo

The warm gradient may appear as a thin accent, such as a rule beneath a heading or a divider. Never as a background behind text.

Single colour reproduction

Where only one colour is available, print the icon solid in Deep Navy or Pure White with no gradient at all.

06 Semantic colours

A functional layer, outside the brand palette

These colours never appear in the logo and are not counted in the 60–30–10 distribution. They exist for performance charts, status badges, and indicators in client reporting. Each has a **Fill** value for coloured areas and a darker **Text** value that stays legible on white.

 Success Fill #12B76A Text #027A48 Growth, target met	 Warning Fill #FFB800 Text #A66A00 Needs attention, nearing a limit	 Error Fill #FF2A00 Text #C41A00 Decline, failure, error	 Info Fill #007BFF Text #0062CC Neutral, notes, links
---	---	---	---

07 Contrast rules

WCAG AA requires at least 4.5:1 for body text

These rules are binding across every digital asset. The figures are contrast ratios against the text colour stated.

 Start a Project Deep Navy on white text · 17.7:1 · pass	 See Our Work #0062CC on white text · 5.9:1 · pass	 Book a Free Call Amber with Deep Navy text · 10.3:1 · pass
 Book a Free Call Amber on white text · 1.7:1 · fail	 See Our Work Electric Blue on white text · 4.0:1 · large text only	 Delete Campaign Dynamic Red on white text · 3.8:1 · large text only

The key to using amber. Amber can still be the loudest call-to-action on the page, provided the label is set in Deep Navy rather than white. At 10.3:1 it outperforms the blue button. The colour was never the problem; pairing it with white text was. The same principle applies to Electric Blue and Dynamic Red: switch to the darker Text variant whenever the type is at body size.

08 The 60–30–10 rule

Colour proportion across all media

-  **60% Navy and white.** Backgrounds, body copy, and the structural frame of every layout. This is what guarantees legibility.
-  **30% Electric Blue.** Navigation, borders, secondary iconography, and links.
-  **10% Amber and Red.** Strictly limited to the primary call-to-action, alert badges, and the logo itself. One amber call-to-action per screen is enough.

09 Approved pairings

Background and text combinations

Heading Body copy sits here. White with Navy and Neutral 500.	Heading Body copy sits here. Neutral 50 for alternating sections.	Heading Body copy sits here. Navy with white and Neutral 300.	Heading Body copy sits here. Amber panels take Navy type only.
--	--	--	---

10 Chart sequence

Fixed order for data series

Charts in client reporting use this order so that the same metric keeps the same colour from one report to the next. Do not reorder it to suit an individual chart.

					
01 Organic #12B76A	02 Paid #007BFF	03 Direct #001741	04 Referral #94A2B8	05 Social #FFB800	06 Other #FF2A00

Six series is the ceiling. Beyond six the palette starts repeating and the chart stops being readable. Group the remainder into a single "Other" series rather than inventing additional colours.

11 Before anything ships

Final check

Contrast Every button uses an approved pairing.	Proportion Amber appears twice at most per screen.	Clear space One icon height of space around the lockup.	Colour proof Press work proofed, especially the amber.
---	--	---	--

12 Website

Navigation, hero, and call-to-action hierarchy

One amber action, one outlined secondary action. The navy field carries the 60%, the white type and rules sit within it, and amber appears twice at most on the whole screen.

13 Social media

Profile marks and post templates

14 Business card

85 × 55 mm, 4 mm margin

Front. Deep Navy field, reversed lockup, icon watermark bleeding off the lower right corner.

Job Title

name@domain.com

+00 000 000 000

vaeleon.com

Reverse. White field, Navy name, one amber rule as the only accent.

15 Correspondence

Letterhead and email signature

vaeleon.com
hello@domain.com

Letterhead. Lockup top left, warm gradient hairline, solid Navy footer bar.

First Last

Job Title · Vaeleon

name@domain.com · vaeleon.com

Email signature. Links use the Info Text value #0062CC, not Electric Blue, so they stay legible at body size.

SIGNATURE SPECIFICATION

Maximum width	500 px
Accent rule	3 px, warm gradient
Name	15 px, Navy
Role and detail	12 px, Neutral 400
Links	12 px, #0062CC
Lockup	90 px wide, PNG at 2x

No social icons, no quotations, no background images. Every element beyond this list weakens the signature and increases the chance of it rendering badly in a client inbox.

16 Presentation

16:9 title and content slides

Title slide. Navy field, icon watermark at 14% opacity.

Content slide. White field, Electric Blue eyebrow, chart sequence applied.

17 Client report

The most colour-sensitive asset we produce

Watch the proportion. Amber appears exactly once, as the marker on the most recent month. That single dot is the 10%. Using amber for a whole series would lose it against the white field and break the distribution rule at the same time.
